Microwave/RF Applicators and Probes, Second Edition: for Material Heating, Sensing, and Plasma Generation Mehrdad Mehdizadeh

Microwave/RF Applicators and Probes for Material Heating, Sensing, and Plasma Generation, Second Edition, encompasses the area of high-frequency applicators and probes for material interactions as an integrated science.

Based on practical experience rather than entirely on theoretical concepts, and emphasizing phenomenological explanations and well-annotated figures, the book represents one of the most important resources on the topics of microwave technologies, applications of RF and microwaves in industry (industrial heating and drying), and microwave engineering.

After covering the basics of field-material interactions, the book reviews and categorizes probes and applicators, demonstrates their real-world applications, and offers numerically solved examples.

Readers will find valuable design rules and principles of high-frequency applicators and probes for material processing and sensing applications in this expanded edition.

- Presents new information on how the interactions of electromagnetic fields with materials at high frequencies have given rise to a vast array of practical applications in industry, science, medicine, and consumer markets
- Thoroughly revised and expanded edition, providing an update on the most recent trends and findings
- Contains many new sections within existing chapters, along with new chapters on applicators for plasmas at microwave/RF frequencies

From reader reviews:

James Shipp:

Have you spare time for just a day? What do you do when you have far more or little spare time? Yes, you can choose the suitable activity to get spend your time. Any person spent their own spare time to take a stroll, shopping, or went to the actual Mall. How about open or read a book called Microwave/RF Applicators and Probes, Second Edition: for Material Heating, Sensing, and Plasma Generation? Maybe it is to become best activity for you. You already know beside you can spend your time together with your favorite's book, you can more intelligent than before. Do you agree with its opinion or you have additional opinion?

Dan Gray:

Hey guys, do you wishes to finds a new book to study? May be the book with the title Microwave/RF Applicators and Probes, Second Edition: for Material Heating, Sensing, and Plasma Generation suitable to you? The book was written by well known writer in this era. Often the book untitled Microwave/RF Applicators and Probes, Second Edition: for Material Heating, Sensing, and Plasma Generation is one of several books which everyone read now. This particular book was inspired many men and women in the world. When you read this reserve you will enter the new way of measuring that you ever know just before. The author explained their idea in the simple way, so all of people can easily to recognise the core of this book. This book will give you a lots of information about this world now. To help you see the represented of the world within this book.

Glenn Wallin:

Do you one of the book lovers? If so, do you ever feeling doubt while you are in the book store? Try and pick one book that you never know the inside because don't evaluate book by its cover may doesn't work the following is difficult job because you are scared that the inside maybe not while fantastic as in the outside seem likes. Maybe you answer is usually Microwave/RF Applicators and Probes, Second Edition: for Material Heating, Sensing, and Plasma Generation why because the amazing cover that make you consider regarding the content will not disappoint you. The inside or content will be fantastic as the outside or cover. Your reading 6th sense will directly direct you to pick up this book.

Sheila Messina:

Reading a book for being new life style in this year; every people loves to learn a book. When you learn a book you can get a great deal of benefit. When you read textbooks, you can improve your knowledge, mainly because book has a lot of information onto it. The information that you will get depend on what forms of book that you have read. If you would like get information about your research, you can read education books, but if you want to entertain yourself you can read a fiction books, this kind of us novel, comics, and also soon. The Microwave/RF Applicators and Probes, Second Edition: for Material Heating, Sensing, and

Plasma Generation will give you new experience in studying a book.
