This is a book that can teach you how to draw in a short time, and it is also a practical operation manual in developing observation and creativity. The author believes the reason that most people cannot draw well is not because they lack skills, but their brain gives up in advance. People's brain can be divided into left brain and right brain. Left brain is good at logics and thinking, which is sensitive to the orderliness of things, while the right brain is good at sensibility and observation, which is sensitive to the details of things. Due to the education we received, adults' logic thinking abilities are much better than their observation abilities. In daily learning process, the sense of left brain easily oppresses the sensibility in right brain. Only when we know the importance of right-brain thinking and try to change perspectives appropriately, we can draw things as good and real as they look. In this book, it has some simple exercises of developing right brain, such as drawing lines, practicing signatures, drawing moods, drawing backwards, drawing faces, drawing hands, drawing shadows and etc. As long as you fully use your right-brain thinking in drawing, in as short as five days, you will find you gain inspiration all of a sudden and draw a beautiful painting that amazes yourself. What you need is not endless practice, but only another perspective to look at things.
