Transcendental Representations with Applications to Solids and Fluids (Mathematics and Physics for Science and Technology) Luis Manuel Braga da Costa Campos

Building on the author's previous book in the series, *Complex Analysis with Applications to Flows and Fields* (CRC Press, 2010), **Transcendental Representations with Applications to Solids and Fluids** focuses on four infinite representations: series expansions, series of fractions for meromorphic functions, infinite products for functions with infinitely many zeros, and continued fractions as alternative representations. This book also continues the application of complex functions to more classes of fields, including incompressible rotational flows, compressible irrotational flows, unsteady flows, rotating flows, surface tension and capillarity, deflection of membranes under load, torsion of rods by torques, plane elasticity, and plane viscous flows. The two books together offer a complete treatment of complex analysis, showing how the elementary transcendental functions and other complex functions are applied to fluid and solid media and force fields mainly in two dimensions.

The mathematical developments appear in odd-numbered chapters while the physical and engineering applications can be found in even-numbered chapters. The last chapter presents a set of detailed examples. Each chapter begins with an introduction and concludes with related topics.

Written by one of the foremost authorities in aeronautical/aerospace engineering, this self-contained book gives the necessary mathematical background and physical principles to build models for technological and scientific purposes. It shows how to formulate problems, justify the solutions, and interpret the results.

From reader reviews:

Stacy Vincent:

The book Transcendental Representations with Applications to Solids and Fluids (Mathematics and Physics for Science and Technology) gives you the sense of being enjoy for your spare time. You can utilize to make your capable more increase. Book can to become your best friend when you getting stress or having big problem with the subject. If you can make studying a book Transcendental Representations with Applications to Solids and Fluids (Mathematics and Physics for Science and Technology) for being your habit, you can get considerably more advantages, like add your capable, increase your knowledge about a number of or all subjects. You are able to know everything if you like start and read a e-book Transcendental Representations with Applications to Solids and Fluids (Mathematics and Physics for Science and Technology). Kinds of book are several. It means that, science guide or encyclopedia or some others. So , how do you think about this reserve?

Al Fraire:

What do you think about book? It is just for students since they're still students or that for all people in the world, what the best subject for that? Simply you can be answered for that issue above. Every person has several personality and hobby for every single other. Don't to be pushed someone or something that they don't desire do that. You must know how great in addition to important the book Transcendental Representations with Applications to Solids and Fluids (Mathematics and Physics for Science and Technology). All type of book would you see on many resources. You can look for the internet options or other social media.

John Cotton:

This Transcendental Representations with Applications to Solids and Fluids (Mathematics and Physics for Science and Technology) are reliable for you who want to certainly be a successful person, why. The reason why of this Transcendental Representations with Applications to Solids and Fluids (Mathematics and Physics for Science and Technology) can be one of the great books you must have is definitely giving you more than just simple reading food but feed you with information that probably will shock your prior knowledge. This book is definitely handy, you can bring it almost everywhere and whenever your conditions in the e-book and printed kinds. Beside that this Transcendental Representations with Applications to Solids and Fluids (Mathematics and Physics for Science and Technology) forcing you to have an enormous of experience for example rich vocabulary, giving you trial of critical thinking that we understand it useful in your day pastime. So , let's have it and revel in reading.

Debbie Gray:

Playing with family inside a park, coming to see the sea world or hanging out with buddies is thing that usually you have done when you have spare time, after that why you don't try matter that really opposite

from that. Just one activity that make you not sensation tired but still relaxing, trilling like on roller coaster you are ride on and with addition details. Even you love Transcendental Representations with Applications to Solids and Fluids (Mathematics and Physics for Science and Technology), it is possible to enjoy both. It is great combination right, you still would like to miss it? What kind of hang type is it? Oh come on its mind hangout people. What? Still don't have it, oh come on its referred to as reading friends.
